

AORMS

INVESTOR BRIEF

The office intelligence system for architecture practices.

A continuous cognition engine that observes an architecture firm, reasons across its pressure points, predicts risk, and recommends the one action that matters — built India-native, from the ground up.

Human Centric Works · 2026

THE PROBLEM

Architecture firms fail on operations, not design

Brilliant studios run on spreadsheets, WhatsApp, and the memory of one or two senior people. The drawings are excellent; the operations are improvised. Money and momentum leak in the quiet gaps between projects — an approval that sat too long, an invoice never raised, a consultant who went silent. None of it is a design failure. All of it is a coordination failure, and the principal is the bottleneck.

THE SOLUTION

Continuous office cognition

AORMS reads the whole practice as one system — clients, drawings, approvals, billing, revisions, and team load — then observes, reasons, predicts where pressure is building, and recommends the single highest-leverage action for the day. It does the watching so the principal doesn't have to. The screen is calm by design: most of the office is fine, so it says so, and surfaces the one place that needs attention.

WHY NOW

Reasoning is finally good enough — and practices are digitising

LLM and behavioural reasoning have crossed the threshold where software can triage an office, not just store its records. At the same time, Indian practices are moving off paper and into tools, while compliance (GST, TDS, COA fees) grows more intricate every year. The firm that encodes that complexity natively wins the workflow.

MARKET

An underserved, India-native segment

India has one of the largest pools of registered architects in the world, and the mid-size practice — busy enough to feel the pain, too small for enterprise software — is poorly served by generic project tools built for somewhere else. AORMS is built for that firm: rupees in paise, the April–March year, GST and SAC codes, rate books, and COA fee logic, assumed from the ground up.

PRODUCT & MOAT

Deep domain encoding for AEC consultancies

The moat is depth in AEC consulting-office operations: operational and design frameworks for architecture and engineering firms; EmOI dual-tier intelligence; revision and approval models in AORMS-Studio; governed knowledge and audit trails. One standard cloud licence with unlimited users — usage-based storage and AI.

BUSINESS MODEL

Self-hosted licence and hosted SaaS

AORMS is cloud SaaS at aorms.in — one standard licence, unlimited users, 5 GB included storage, and metered storage plus AI beyond that. BYO API key supported. The public marketing surfaces, wiki, and demo double as a low-cost acquisition channel.

TRACTION

A working, demoable product — not a deck of mockups

The AORMS-Studio vertical is built and demoable: projects, fees, GST invoicing, drawings, revisions, client and consultant portals, Studio Intelligence, and ESTI. A fully seeded demo practice opens in one click; dashboard numbers are computed from real records. Platform frameworks and additional industry workspaces are on the roadmap.

THE ASK

Let's talk

We're raising to expand jurisdiction coverage, stand up the hosted offering, and build out go-to-market.
